

Victoria Yang

(909)729-7491 | victoriayang425@gmail.com | vicyang@stanford.edu

EDUCATION

Stanford University

Stanford, CA

Intended major: Computer Science, B.S.

Expected Graduation: June 2029

Relevant coursework: Machine Learning, Trust and Safety, Programming Abstractions, Computer Organization & Systems, Mathematical Foundations of Computing, Applied Matrix Theory, Linear Algebra, Multivariable Calculus, and Modern Applications

Massachusetts Institute of Technology Beaver Works Summer Institute

Remote

Rigorous cybersecurity immersion program: IoT Security, reverse engineering, and offensive/defensive techniques

July 2024

Non-Trivial Fellowship (172 fellows out of 11,583 applicants)

Remote

Conducted cognitive science research on the impact of fiction on AI apathy

May 2024

TECHNICAL EXPERIENCE

DeepTempo

Hybrid | Stanford, CA

Machine Learning Intern

February 2026 - Present

- Build and validate ML pipelines for network intrusion detection with feature engineering and eval on high dimensional flow data
- Generate synthetic NetFlow data reflecting enterprise traffic for anomaly detection models via statistical distribution fitting

Socket

Remote

Machine Learning Intern (incoming)

June - September 2026

- Incoming at open-source supply chain security platform focused on malicious package detection

Stanford Applied Cyber, Collegiate Cyber Defense Competition | Western Regional Champion, National 7th

Stanford, CA

Network Lead

November 2025 - Present

- Defend live infrastructure against active red team attacks: configure firewalls, harden network devices, and maintain scored service uptime under pressure
- Apply defense-in-depth across environments simulating real corporations, balancing tradeoffs between security and accessibility

Stanford Artificial Intelligence Laboratory (SAIL) Dror Lab

Stanford, CA

Research Assistant

October 2025 - March 2026

- Integrated state-of-the-art ML methods into ligand-protein binding affinity prediction pipelines for computational drug discovery
- Reviewed recent literature in ML-driven drug discovery to identify research gaps and promising directions

California State Polytechnic University, Pomona

Hybrid

Research & Software Engineering Intern

June 2023 - August 2024

- Published & presented (first author) at 5th International Conference on Semantic & Natural Language Processing, awarded first place at IgniteCS Programming Expo, GameGala, and Orange County Science and Engineering Fair (Behavioural Science)
- Designed and launched ML-based music therapy intervention application, live on the Apple App Store and Google Play

Carnegie Mellon University

Remote

AI Research Intern

Summer 2024

- Implemented and fine-tuned image editing models on Azure VMs to support culturally appropriate visual storytelling

Google

Hybrid | Irvine, CA

Career Exploration Intern

Summer 2024

- Developed pitch decks, financial models, and one-pagers; researched market trends to guide strategic recommendations

PROJECTS

Transformer-Based Temporal Aggregation for Illicit Bitcoin Transaction Detection (CS229 Machine Learning, Stanford)

- Replaced EvolveGCN's recurrent weight evolution with a causally-masked Transformer encoder to capture long-range temporal dependencies in dynamic Bitcoin transaction graphs
- Designed a leakage-free evaluation protocol exposing inflated baselines in prior work; reproduced EvolveGCN-O and ran feature-only baselines (XGBoost, Logistic Regression) on the Elliptic dataset

Hybrid Fraud Detection for Fake Job Postings (CS152 Trust & Safety, Stanford)

- Designed a hybrid rule-based + LLM (Gemini 2.5 Flash) classifier with a moderator-feedback loop that auto-injects closed decisions as in-prompt few-shot examples; F1 0.913 / 0.95 fraud recall / 4.5× lower cost than pure-LLM on a 200-example balanced eval
- Owned ML and backend integration on a 5-person team; shipped the production classifier on a Next.js/Supabase/Vertex AI stack with fail-closed routing and a three-approach offline evaluation harness (TF-IDF + LR, LLM, hybrid)
